

TRACY LI | Software Engineer

junlantracyli@gmail.com | in/junlantracyli | Seattle, WA

QUALIFICATIONS & SKILLS

Languages: JavaScript (ES6, Node.js), Python, TypeScript, Java, C#

Libraries/Platforms: React, Appian, Mendix, Tailwind, Bootstrap, Flask, jQuery, Express, MVC 5 ([ASP.NET](#))

Data/Databases: Oracle SQL Developer, MongoDB, PostgreSQL, MySQL, Mongoose, Supabase, JSON, AJAX

Cloud/Technologies: Postman, Jenkins, Bitbucket, AWS Cloud Technologies, Google Cloud Platform (GCP)

PROFESSIONAL EXPERIENCE

Software Engineer | Hal9 | Seattle, WA

August 2025 - Present

- Built and shipped full-stack, customer-facing AI MVPs using **React, TypeScript, and Node.js** by integrating frontend applications with internal RESTful APIs and backend data services, supporting **5+** external customer pilots and demos.
- Designed and integrated AI-driven report generation workflows using **JavaScript/TypeScript**-based services and an internal inference proxy, handling asynchronous requests, error states, and data flow between React frontend views and backend APIs, enabling automated generation of **100+** reports and reducing turnaround time by **~40%**.
- Designed **API-driven workflows** to support AI configuration, data querying, and asynchronous updates across frontend and backend systems, reducing manual setup effort for new customer deployments by **~35–40%**.
- Implemented pre-rendering and frontend performance optimizations for dynamic, data-intensive views, improving initial page load times by **~30%** and increasing reliability during live customer onboarding and investor demos.
- Integrated Google Calendar APIs via **Google Cloud Platform**, handling OAuth authentication, event lifecycle management, and backend synchronization logic.
- Improved reliability of customer-facing chatbot functionality by diagnosing and resolving frontend state management issues and **backend Python API** integration errors, reducing user-reported errors by **~30%**.

Software Engineer | Princeton Blue, Inc. | Seattle, WA

Apr 2023 - May 2025

- Engineered distributed system orchestration and backend automation in **AWS Cloud** and Appian, scaling sample request workflows across global scientific labs (**1,000+ requests/day**), and improving data consistency and process traceability.
- Integrated **AWS Redshift** with Appian cloud platform to automate disease testing and healthcare data workflows, reducing user clicks by **45%** and processing time by **25%** for five scientific teams.
- Built and optimized **REST API** integrations with healthcare directory services, doubling lookup speeds and search accuracy for user data retrieval in production environments.
- Designed dynamic sample generation pipelines for **big data** integration with **advanced SQL** and **Oracle SQL Developer**, doubling throughput for **5,000+** records per batch.

Associate Software Engineer | Princeton Blue, Inc. | Seattle, WA

Sept 2021 - Apr 2023

- Partnered with scientists, stakeholders, and IT to build unified lab systems and streamline research/sample tracking into cohesive, **automated workflows**, boosting traceability and operational efficiency.
- Implemented **containerization** (Appian deployment packages) for modular, portable cloud delivery, enhancing **DevOps** and infrastructure scalability.

Software Developer | Foodprint Group | Brooklyn, NY

Feb 2021 - Sept 2021

- Built responsive, cross-device UIs with **custom SCSS/CSS** and dynamic **JavaScript** filters, reducing feature rollout time by **20%** and boosting report load performance by **30%**.
- Improved **CI/CD pipeline** performance with **Jenkins**, cutting deployment time by **two hours per release** and enabling a **15% faster** feature rollout.

EDUCATION

The University of Alabama, AL (B.S. in Information Systems Management)

May 2021
